

**TOPICS : Electrochemistry**

- The position of some metals in the electrochemical series in decreasing electropositive character is given as  $Mg > Al > Zn > Cu > Ag$ . What will happen if a copper spoon is used to stir a solution of aluminium nitrate?
  - The spoon will get coated with aluminium
  - An alloy of copper and aluminium is formed
  - The solution becomes blue.
  - There is no reaction.
- The ionic conductances of  $Al^{3+}$  and  $SO_4^{2-}$  at infinite dilution are  $x$  and  $y$   $ohm^{-1} cm^2 mol^{-1}$  respectively. If Kohlrausch's law is valid, then molar conductance of aluminium sulphate at infinite dilution will be
  - $3x + 2y$
  - $3y + 2x$
  - $2x + 2y$
  - $3x + 3y$
- A solution of sodium sulphate in water is electrolysed using inert electrodes. The products at the cathode and anode are respectively
  - $H_2, O_2$
  - $O_2, H_2$
  - $O_2, Na$
  - $O_2, SO_2$
- Saturated solution of  $KNO_3$  is used to make 'salt-bridge' because
  - velocity of  $K^+$  ions is greater than that of  $NO_3^-$  ions
  - Velocity of  $NO_3^-$  ions is greater than that of  $K^+$  ions.
  - Velocities of both  $K^+$  and  $NO_3^-$  ions are nearly the same
  - $KNO_3$  is highly soluble in water
- The quantity of electricity needed to electrolyse completely 1 M solution of  $CuSO_4$ ,  $Bi_2(SO_4)_3$ ,  $AlCl_3$  and  $AgNO_3$  each will be
  - 2F, 6F, 3F and 1 F respectively
  - 6F, 2F, 3F and 1 F respectively
  - 2F, 6F, 1F and 3 F respectively
  - None of these
- How many minutes would be required to deposit copper in 500 mL of 0.25 N  $CuSO_4$  by a current of 75 milliamperes?
  - 1340 min
  - 670 min
  - 2680 min
  - 5360 min
- Standard electrode potentials for Fe electrode are given as
 
$$Fe^{2+} + 2e^- \rightarrow Fe; E^\circ = -0.44 V$$

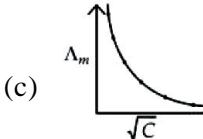

$$Fe^{3+} + e^- \rightarrow Fe^{2+}; E^\circ = +0.77 V$$
 $Fe^{2+}$ ,  $Fe^{3+}$  and Fe blocks are kept together then
  - $[Fe^{3+}]$  decreases
  - $[Fe^{3+}]$  increases
  - $[Fe^{2+}/Fe^{3+}]$  remains unchanged
  - $[Fe^{2+}]$  decreases
- Which one of the following does not hold good for S.H.E?
  - The pressure of hydrogen gas is 1.5 atmosphere
  - The concentration of  $H^+$  in solution is 1 M
  - The temperature is 298 K
  - The surface of platinum electrode is coated with platinum black
- Which of the following metals cannot be obtained by the electrolysis of the aqueous solution of their salts?
  - Ag and Mg
  - Mg and Al
  - Ag and Al
  - Cu and Cr
- Which of the following curve shows the variation of  $\Delta_m$  of a weak acid with  $\sqrt{C}$ ?
 

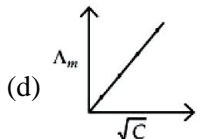

(a)

(b)

(c)

(d)
